		>3,016 mg/kg (Rat) Bodyweight (respiratory disturbance, salivation, locomotor effects, reduced growth rate)
Inhalative	LC50/96 hours	>100 mg/l (Trout)

· **Primary irritant effect:**

· **On the skin:**

In an occluded 4 hr exposure test in rabbits, a 1% saline solution of Aivlosin tartrate was non-irritating. A 10% saline solution was mildly irritating to the skin.

· **On the eye:** No irritating effect.

· **Sensitization:**

In a Guinea pig maximization assay (Magnusson-Kilgmann) 12 of 20 animals showed discreet or patchy erythema following challenge. Aivlosin tartrate is considered to be a mild sensitizer.

· **Germ cell mutagenicity**

No evidence of mutagenic potential in bacterial and mammalian cell gene mutation assays. In in vitro cell culture assays structural chromosomal damage was observed in two studies, however, in three in vivo tests, no evidence of chromosomal damage was observed.

· **Carcinogenicity** Studies were not required as short term tests showed no relevant adverse effects.

· **Reproductive toxicity**

There were no adverse effects on parameters of reproduction in rats fed tylvalosin in the diet up to 10,000 ppm, a dose which produced maternal toxicity. Fetuses from the 10,000 ppm dose group had slightly reduced body weights. NOEL 400 ppm (approx 18 mg tylvalosin/kg bodyweight).

Developmental toxicity studies in rats and mice showed slightly reduced fetal body weights, but only at doses which were maternally toxic. There was no evidence of other developmental effects and no evidence of teratogenic effects in either species.

· **Carcinogenic categories:**

· **IARC (International Agency for Research on Cancer):**

None of the ingredients are listed.
